Abstract

Abstract. Still to be written.

Keywords: acoustic telemetry, geolocation modelling, mustelus asterias

1. Bibliography styles

Let's see how we can cite differently: [Nathan \(2008\)](#) or [Dodge et al. \(2013\)](#).

⁴Promotor

(Nathan, 2008; Dodge et al., 2013). Does this work as well?

By default, natbib will be used with the `authoryear` style, set in `classoption` variable in YAML. You can set extra options with `natbiboptions` variable in YAML header. Example

2. Introduction

```
natbiboptions: longnamesfirst,angle,semicolon
```

There are various more specific bibliography styles available at https://support.stmdocs.in/wiki/index.php?title=Model-wise_bibliographic_style_files. To use one of these, add it in the header using, for example, `biblio-style: model1-num-names`.

3. Figures and tables

Figure 1 is generated using an R chunk.

Figure 1: Raw depth and temperature log for tag 1293308, the female shark that logged data from August, 2018 to August, 2019.

4. Tables coming from R

Tables can also be generated using R chunks, as shown in `?@tbl-simple` example.
